## AMBROGIO

All our customers say and ask .....

The market demands a remote control because it gives a perception to the End User of a better, complete and technologically more advanced stove.

The necessary remote control should be even richer than the "thin" one, which is perfect for the economic segment, so we will be able to support a more powerful solution which has been requested for a long time.

The handheld radio solution is very beautiful and already widely used, if we could have a new handheld even slightly less powerful and not radio (unidirectional IR) but cheaper we could match it, with satisfaction, to the stoves that currently do not have it as standard equipment, and increase the value and prestige of the products.

The market would like a new remote control with a simple, flat, ergonomic design, which would provide the detail of the room temperature with a certain precision, which allows the chrono to be adjusted very easily, with a cute display of immediate interpretation, essential direct commands "without having to think".

Obviously it has to have the possibility to be customized where the quantities allow, for example the color of the case and the design of the button panel with the insertion of its logo.

We need the ready-made solution to try and to be inserted as soon as possible on our stoves.

..... All our customers have longed and asked for AMBROGIO, now they can receive it, try inserting it on all their own innovative products, adding the long-awaited added value.

Micronova is pleased to introduce AMBROGIO, the new remote control to meet all needs.
